STEPHANIE WOLFE

Technical Lead | Software Engineer
stephymeyers1990@gmail.com
stephaniewolfe.dev | github.com/StephanieWolfe | linkedin.com/in/stephanie-wolfe-dev

SUMMARY

Technical lead and software engineer with 12 years of hands-on development experience in the insurance industry, including 5+ years leading technical teams while continuing to write and review production code. Deep expertise in insurance operations — policy administration, billing, claims, and regulatory compliance — combined with a strong engineering background spanning full-cycle application development, system design, and legacy modernization. Recently built and deployed two full-stack applications to demonstrate current modern stack capabilities. Seeking a technical lead role at an insurance software company where domain knowledge and engineering depth are both valued.

CORE COMPETENCIES

Insurance Domain: Policy administration, billing systems, claims workflows, regulatory compliance, P&C insurance operations, business requirements analysis, QA process, CAB board experience

Technical Leadership: Team mentoring and development, technical architecture decisions, code review, cross-functional stakeholder communication, project planning and delivery, Agile and Waterfall environments

Engineering (Professional): COBOL (Net Express & Visual COBOL), JavaScript, HTML5/CSS, SQL (MySQL), PowerShell, REXX/Object REXX, REST APIs, cURL, PHP (minor)

Engineering (Portfolio/Recent): Node.js, Express, Vue, React, PostgreSQL, JWT Auth, Cloudinary, REST API design, Anthropic/LLM API integration, Git/GitHub, cloud deployment (Render)

College Background (Refreshing): C#, Java, C++, PHP

PORTFOLIO PROJECTS

Insurance Quote App (Full-Stack) -- stephaniewolfe.dev/projects | Live: insurance-api-client.onrender.com

- Built and deployed a full-stack auto insurance application: React frontend, Node.js/Express/PostgreSQL backend, rules-based premium calculation engine, and an AI-powered coverage recommendation feature using the Anthropic Claude API — grounded in real calculated data to prevent hallucinated pricing.
- Demonstrates modern stack capability including REST API design, JWT authentication, input validation (Zod), cloud deployment, and LLM integration.

Recipe Book (Full-Stack) -- stephaniewolfe.dev/projects | Live: recipe-book-9anl.onrender.com

- Built and deployed a full-stack recipe management application with a classic cookbook aesthetic — Vue frontend, Node.js/Express/PostgreSQL backend, Cloudinary image upload integration, and JWT authentication.
- Features recipe browsing by category, photo uploads via Cloudinary, full CRUD with protected admin routes, and a two-column cookbook-style detail layout.

Personal Portfolio & Blog -- stephaniewolfe.dev

- Built and deployed a personal portfolio site with Vue frontend and Node.js backend, including a full blog system with JWT-protected write/edit/delete, draft support, and PostgreSQL storage.

PROFESSIONAL EXPERIENCE

Director of IT (hands-on, individual contributor work continued) | Rockwood Casualty Insurance Company 2024 – Present

- Continued writing and reviewing production code alongside management duties — did not transition fully out of development.
- Leading migration of Microsoft Access database to Snowflake cloud data platform — conducted initial technical investigation, defined migration approach, and directed development team on implementation path.
- Independently configured, tested, and recompiled a Micro Focus Visual COBOL version 6 to version 10 upgrade across enterprise insurance systems, managing compatibility and stability throughout the transition.
- Planned and executed Windows Server 2008 to Server 2019 infrastructure upgrade across enterprise systems, ensuring application compatibility, security compliance, and zero production downtime.

- Led security protocol implementation and data-integrity controls across core systems, including code-level changes to enforce compliance requirements.
- Managed and mentored IT staff while remaining the technical escalation point for complex engineering problems.

Tech Lead | Rockwood Casualty Insurance Company 2021 – 2024

- Designed scalable software systems and selected frameworks, databases, and architecture patterns for team projects.
- Led and contributed hands-on development of a full General Liability insurance platform modernization — replacing a 20-30 year old system with current rates and forms, converting hardcoded values to database-driven tables, migrating flat files to SQL, transitioning DOS-based screens to a web interface, and implementing fillable PDF generation using Apache FOP. All built in COBOL.
- Configured and led migration of COBOL development environment from Micro Focus Net Express to Visual COBOL, modernizing the team's toolchain while maintaining production continuity.
- Led MySQL version 5 to version 8 database upgrade across enterprise systems, managing compatibility testing, query behavior changes, and zero-downtime cutover.
- Championed and led a multi-year initiative to replace Object REXX scripting with PowerShell across all enterprise systems — completed the full transition, eliminating REXX from the codebase entirely.
- Implemented development, testing, and deployment standards that reduced defects and improved delivery speed.

Associate Service Delivery Manager | Rockwood Casualty Insurance Company 2019 – 2021

- Led development teams delivering multiple production systems on schedule, with hands-on involvement in design and code review.
- Worked directly with business stakeholders to define requirements, then translated them into technical solutions with the dev team.

Solutions Analyst | Rockwood Casualty Insurance Company 2018 – 2019

- Identified inefficient routines in production systems and built solutions that reduced errors and improved performance.
- Led project teams through complex, large-scale technical initiatives from design through delivery.

Software Developer | Rockwood Casualty Insurance Company 2014 – 2018

- Designed, developed, and supported enterprise applications in COBOL, REXX, PowerShell, HTML5, CSS, and JavaScript across Web-TDS and PC-TDS platforms.
- Built a VIN/vehicle data management system that reduced annual asset-management time for registration and insurance renewals.
- Migrated core data operations from legacy index files to SQL tables, improving data accuracy and maintainability enterprise-wide.
- Converted General Ledger system from flat file storage to SQL tables, consolidating four separate ledger detail files into a single unified database table.
- Diagnosed and resolved coding defects across the full development lifecycle, from design through production support.

EDUCATION

B.S. Computer Science -- University of Pittsburgh at Johnstown

B.S. Physics & Mathematics, Minor in Computer Science -- Clarion University of Pennsylvania

ITIL Certified
